Image = 256 x 256 x 3

Over iterations nscales= $4 - 1 : -1 : 0$

1. scale image (2^{iter}) i.e in first iter=3 : $256/2^3 = 32$

2. then generate on with 2 dim more, (i.e scale im with $256/2^2 = 64$)

- In first iteration, i.e iter $= 3$: estime adsn model on scaled image (32x32x3)
